Linkdin

"An enthusiast and detail oriented Computer Engineer with skills in Python, SQL, and machine learning. with Experienced in working with datasets, building predictive models, and creating visualizations to communicate insights. Currently pursuing a degree in Computer Engineering and seeking opportunities to apply my knowledge in practical settings."

EDUCATION

Bachelor of Engineering in Computer Engineering

2023 - 2027

Government Engineering College of Palanpur

- CPI : 8.44 / 10
- CGPA : 9.02 / 10

HSC (Science)

2021 - 2023

Lord Krishna School of Science Patan

PROFESSIONAL EXPERIENCE

Edunet Foundatuion

May - Jun 2025

- Completed a 4-week internship on Artificial Intelligence and Microsoft Azure under an initiative by Microsoft in collaboration with Edunet Foundation and AICTE.
- Gained practical knowledge of Microsoft Azure cloud services and AI technologies.
- Explored real-world applications of Artificial Intelligence and cloud computing.
- Developed problem-solving skills by working with emerging technologies and AI-based concepts.
- Enhanced technical knowledge and understanding of AI, cloud computing, and modern technology solutions.

Edunet Foundation

July 2026

- Completed a hands-on internship focused on AI, Data Analytics, Machine Learning, Green Skills, and Sustainability.
- Performed data cleaning, preprocessing, exploratory data analysis (EDA), feature engineering, encoding, and feature scaling using Pandas, NumPy, and Scikit-learn.
- Developed and evaluated Linear Regression and Logistic Regression models using real-world sustainability datasets.
- Developed Eco-Scan AI, an AI-powered waste classification and recycling assistant using CNN, TensorFlow/Keras, and Streamlit.
- Built a system capable of classifying 12 waste categories from uploaded images and providing disposal recommendations and recycling tips.

SKILLS

SOFT SKILLS

- Problem Solving
- Teamwork
- Analytics
- Communication
- Time Management

TECHNICAL SKILLS

- **Programming:** Python, SQL, Java, Advanced java, C, C++, HTML, CSS, JavaScript, PHP.
- **Data Analysis & ML:** Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch
- **Visualization:** Matplotlib, Seaborn, Tableau, Power BI
- **Tools:** GitHub, Excel, PowerBI, MySQL, VS Code, Eclips IDE, Google Antigravity IDE

PROJECTS

- **Student Performance Analyzer :** Analyzed student academic performance and factors influencing final scores. Performed data cleaning, exploratory data analysis (EDA), and statistical analysis. Analyzed relationships between study hours, attendance, assignment scores, and final performance. Created visualizations using bar charts, scatter plots, performance distributions, and correlation heatmaps. Identified top-performing students, performance trends, and students requiring improvement.
- **FAKE NEWS PREDICTION :** Developed a machine learning model using Python and Scikit-learn to classify news articles as real or fake with high accuracy through text preprocessing and feature engineering
- **Eco-Scan AI – Smart Waste Detection and Recycling Assistant :** Developed an AI-powered waste detection and recycling assistant that uses a Convolutional Neural Network (CNN) to classify uploaded waste images into 12 categories and provides disposal bin recommendations, recycling tips, and prediction confidence through a user-friendly Streamlit interface.

CERTIFICATIONS

- Getting Started with data (IBM)
- Data Fundamentals (IBM)
- Artificial Intelligence Fundamentals (IBM)
